# UPLINK

Are you tired of the tiny notepads?
Did you ever want to attach a picture of the mic positioning,
or the knob settings of some loved old HW effect not recallable?
maybe you wanted to add a wavfile to your scope/xite project,
or wanted your sequencer project file to be started form within scope/xite?

Just assign a file and open with a button click_

Good vibes from   14.1.2011
